

### **Loop Practice Questions**

1. Write a program to print the first n numbers. Read n from the user.
2. Write a program to print all the even numbers between 1 to 50.
3. Using while loop print multiplication table of 10.
4. Find the maximum of n numbers input by the user.
5. Ask the user for two integers, first a small one then a larger one.  
Multiply these two integers by doing repeated addition. For example, if we were to obtain 3 and 5 from the user, then we would find their product by adding the larger one (5) three times.
